<mark>Problem 1b:</mark>

Description – 2 items
Matt Foreman
Larry Menard

I don't think rounding to two decimal places is necessary for this part because the prices provided are already in two decimal and we are only doing multiplication so the totalcost will always be in two decimal places.

```xml
1 <?xml version="1.0" encoding="UTF-8"?>
2 <totalcost partid="100-100-01">139.86</totalcost>
3 <totalcost partid="100-101-01">219.89</totalcost>
4 <totalcost partid="100-103-01">449.91</totalcost>
5 <totalcost partid="100-201-01">43.89</totalcost>
```
